

Get Back to What You Love About Patient Care

Top 3 Takeaways

① Leverage hover technology to crush clicks

That's right. No more typing endlessly on a keyboard. Dr. Heimer of American Health Network, part of Optum, loves that NextGen® Mobile eases common frustrations of documenting care.

With hover technology, providers like Dr. Heimer are wasting less time clicking, clicking, clicking. When documenting includes a simple hover feature, providers get a much-needed efficiency boost in their days.

② Alleviate burnout by finding joy in patient interactions

No one pursues a career in medicine to spend their days staring at a screen. Dr. Heimer looks forward to talking to his patients and strengthening that bond. With extreme time crunches in everyday care, coupled with documentation demands, many providers feel less connected to their patients, resulting in increased feelings of burnout.

Mobile documentation solutions improve the connection between the provider and patient by eliminating what separates them, allowing uninterrupted connections to form, while maintaining documentation quality.

③ Make AI your new ally

AI is the future, and NextGen® Ambient Assist embodies just that. With Ambient Assist, a SOAP note is generated from natural patient/provider conversation in seconds, using ambient listening technology.

Prior to review, notes have 90% accuracy, and once edited and reviewed by a provider, flow directly into NextGen® Enterprise EHR. Dr. Heimer appreciates that this technology minimizes documentation time significantly, but also allows providers to fully focus on their patients during visits.
